CUSTOM CUSHION

Stealth Custom Seat Cushion

The redesigned and re-imagined custom seating brings the best of Stealth with more streamlined design, better materials and simplistic ordering process.

We have re-evaluated the complex rehab process to be able to offer this new line of custom seat cushions that we hope will cover all the basics, plus other challenges along the way. The Custom Seat Cushion is an adaptable seat cushion.

Fast Lead Time Sizes (FLTS)

What does FLTS means?

The *fast lead time sizes* refers to the cushion sizes which materials and items to build those dimensions are kept on inventory for fast assembly. All other dimensions outside the above dimensions will require extended lead time.

Client Specific Sizes

The custom seat cushion allows specific dimensions at *1in (2.40cm)* increments. This customization will be reflected on your quote as *SMDCSHSPO* Specified Dimensions Seat Base. Go to page 13 for full matrix reference.

Cushion Covers

The cushion covers consist mostly of three materials. The contact (top side), non-contact (sides) and anti-slip (bottom side). The non-contact materials (sides and bottom) are always the same, but for the contact material we offer three variations: Coolcore®, Stealth-Tek and Air Mesh.

Coolcore is a research proven performance fabric technology that adapts to its environment and regulates temperature by managing heat and moisture. The proprietary construction helps manage and distribute moisture quickly throughout the fabric to enhance the evaporation and drying time.

Stealth-Tek

Stealth-Tek is a cast coated fabric, which is nylon/polyester fabric coated with polyurethane through the cast coating method. These type of fabrics are waterproof with stretch capability and applications in medical and healthcare. Stealth-Tek is Fluid Proof PU Film laminated to 100% polyester knit T-jersey. It is used in a variety of applications. Waterproof, Breathable and Washable.

🛔 Air Mesh

Air Flow Mesh, better known as Air Mesh, is equipped with fine pores for superior air circulation, it can assist with positioning if the client has sliding issues with the current cushion cover material. This fabric is ideal for those in hot or humid environments.

Need additional protection for the cushion?

The Polyurethane Liner provides four (4) way stretch, waterproof barrier between the cushion cover and the cushion foam and comes with a waterproof zipper.

CUSHION FOAM ayered Foam Structure

Upper Layer

The upper layer is reserved or mostly used with soft material since is the layer in direct contact with the client. At a range of 1/2in (1.27cm) thickness, the upper layer wraps towards the front of the cushion to maintain a constant comfort for the client.

Middle Layer

The middle layer can also include softer foams as well as medium resistance foams.

Lower Layer

The bottom layer recommended foam materials are medium to firm. This will prevent the client from feeling any contour configuration foam materials which are normally more thick to provide abduction and adduction support.

Contour Layer

Use to place abductor and adductor structure material consisting of Etha foam. Placed under the main layers to avoid discommfort to the client and above the anti-thrust and base to help maintain contoured shape.

Base Layer

Required base 5/8in foam, consisting of a closed cell firm foam for rigidity and easy handling.

Available Foams

SunMate® FRG

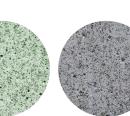

Extra Extra Soft

Extra Soft

Soft

Medium Soft

Medium

SunMate® FRG cushions provide the same high impact energy absorption and soft pressure properties as regular SunMate®, but with an added element of safety. SunMate® FRG contains a non-halogenated fire retardant that allows the cushion to pass more stringent fire tests. FRG also provides medical or government facilities, required to purchase equipment that meets strict fire codes, with a safe, high-quality cushion option.^[1]

Open Cell

Open cell polyurethane foam is a soft foam. Open cell refers to the cell walls, or surfaces of the bubbles, which are broken so that air fills all of the spaces in the material.

Closed Cell

Closed cell foam is a rigid material that provides the kind of stability required for the base of many of our pads and cushions.

Closed Cell it is mostly used functionality, not for use on top

Dynamic Systems Inc. https://www.sunmatecushions.com/blogs/specialty-cushion-articles/85587588-sunmate-frg-now-available-for-online-ordering

Anti-Thrust Layer

to the front edge of anti-thrust.

The anti-thrust provides a boundary to minimize

forward migration of the ITs into a posterior pelvic tilt. Consisting of a closed cell foam, the anti-thrust is a pre-ischial support surface intended to inhibit forward migration of the ischial tuberosities.

Often used when extensor tone is present. The initial placement is half the depth of the cushion to allow for 1in (2.54cm) to 1 1/2in (3.81cm) from ITs

> The FRG is a patented all-natural fire retardant material (no additives) made of 33% to 36% plant-based ingredients.

SPECIAL CONFIGURATIONS

Pressure Relief and Growth Modifications

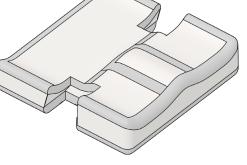

Growth Notch

Growth notches are cut outs that allow you to A hamstring relief is an approximately 45° angle ajust client growth back and fro for the seat depth. set to three different depths from 1in (2.54cm) to 3in (7.62cm) at 1in (2.54cm) increments.

Hamstring Relief

cut to the front of the seat cushion that helps pre-The width of the notch is 2in (5.08cm) and can be vent forward migration of the pelvis due to shortened or tight hamstrings. Also aids in prevention of contact with the back of the legs.

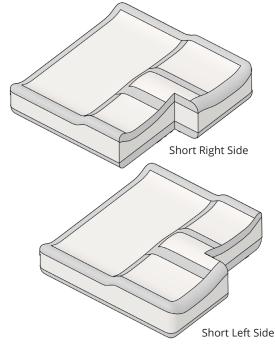

I-Style Configuration

The I-Style allows for growth width adaptability of the lateral pelvic support. The cut-out comes in a predefined dimension of 3in (7.62cm) depth and 2 1/2in (6.35cm) wide per side.

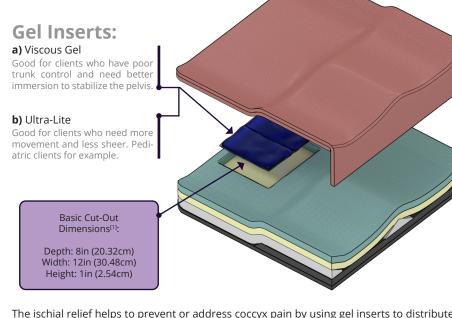

Leg Length Discrepancy **Ischial Relief**

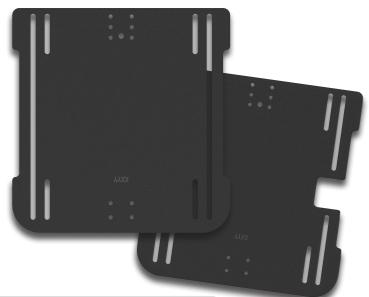

Leg Length discrepancy allows to adjust the seat depth independently per side. The width is predetermined to be half width of the cushion and can be set from 1/2in (1.27cm) to 2in (5.08cm) at 1/2in (1.27cm) increments. You can also use this cut-out to accomodate a residual limb support hardware.

The ischial relief helps to prevent or address coccyx pain by using gel inserts to distribute the pressure in a more organic approach. There are two gel options to choose from which address different types of clients, a) Viscous Gel and b) Ultra-Lite.

1. For most dimensions

MOUNTING Seat Pans / Seat Pan Mounting Hardware

The aluminum seat pan has been tested to match custom cushion weight maximum support of 350lb. The seat pan is black anodized powder coated.

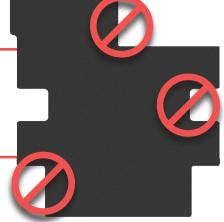

Also this seat pan will match cushion dimensions except if any special configurations is requested such as the Hamstring Relief, in this case the seat pan could be either 1in (2.54cm) or 2in (5.08cm) shorter than the seat total depth.

Depending on cushion dimensions there could be limitations of how many configurations can be combined, taking into consideration hardware placement requirements and weight capacity.

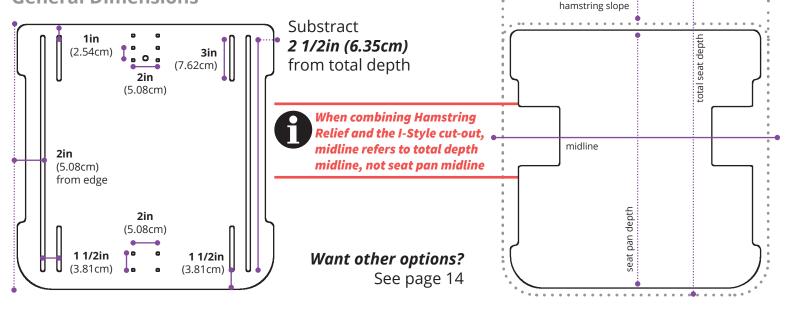

Too many special configuration combination can seriously compromise the seat pan weight capacity and integrity.

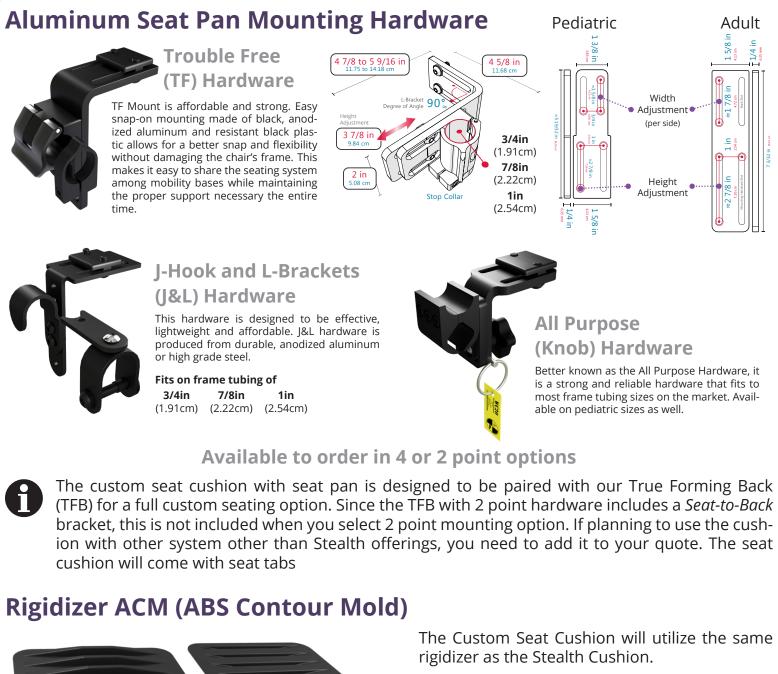

The example on the right illustrate this on a 12in $(30.48 \text{ cm}) \times 12in (30.48 \text{ cm})$ set up. When brainstorming the cushion, prioritize function and weight compromises

General Dimensions

Takes up "hammocking" in the sling to provide a stable flat surface for the cushion.

Comes in 3 widths and it is rated for 350lb weight capacity.

ADDITIONAL OPTIONS

Special Storage & More

Cover Modifications

Zipper Pouch SMDZPCOVMOD

The Custom Seat Cushion is available with an optional zippered pouch.

This option adds a small pouch to the front of the cushion. Dimensions: 8in (20.32cm) Wide 5in (12.70cm) Height

Other Accessories

Stealth has large variety of options for a personalized system, here are some options your might like.

Push & Transfer Gloves

Push & Transfer Gloves have an open finger, half thumb, wrap-around design for easy on and off. Made of leather with padded palms and wrists, the gloves save wear and tear on users' hands throughout a long day of active chair use.

Transfer Boards

Sliding boards are used to promote independence and safety during transfers.For those with impaired balance and upper body strength, we highly recommend Stealth's ADI Anti-Slip Transfer Boards as a transfer-assist tool.

ADI Carbon Fiber Seat Base

The ADI Carbon Fiber seatbase is a viable option for anybody looking to reduce the overall weight of their manual chair setup while still maintain consistent, solid seating.

Ligthweight solution for users under 200lbs.

mo-Vis Hand Warmer

The mo-Vis hand warmer improves the flexibility of cold body parts. The hand warmers main functionality is to keep the area around a wheelchairs input device warm. This increases the comfort of the user and their ability to control the input device.

True Forming Back

The True Forming Back is designed for comfort, custom fit, and trouble-free adjustability. Our easily accessible hardware is available in both two and four point mounting options and is neatly hidden behind a Velcro flap to maintain a sleek and clean appearance.

Tarta® Bag

Tarta Bag offers the following benefits:

- The weight and the bulkheads are positioned under the chair of the wheelchair to stabilize the center of gravity of the vehicle and avoid possible overturning.
- **2.** The position of the Bag allows the user to have all of his possessions at hand and safe.
